CURVED WOOD COMPONENTS

General Information

With ongoing changes in consumer demands, Elias Woodwork is finding revolutionary ways to produce more and more wood products in a radius form. These products are made to compliment radius doors, accent any interior project or just be the centerpiece in any setting.

Many components are made to order in a one of a kind situation. Other products are produced to match existing components like dentil crown molding, face frames and valences.

Face Frames

There are no limitations to the radii, wood species, frame size or size of openings. The face frame can be shaped to fit most complex kitchen designs even if the curve of the face frame is more than one direction on one piece.

Moldings

Almost any molding shown in this catalog as well as any drawing and designs supplied can be manufactured in the radius you require. The radii for moldings are generally unlimited to meet the needs of most industries.
