

Quality Committed, Timely Delivered, Environmentally Driven

Quality Committed, Timely Delivered, Environmentally Driven

Elias Woodwork has been manufacturing top quality cabinet doors and components since 1983. Since then, we have been helping kitchen cabinet manufacturers and refacers, along with residential and commercial millwork companies complete their projects by supplying an industry leading selection of products with quick turnaround times. We have grown a reputation of using modern technology to produce the highest quality products in the custom component industry; all with incredible efficiency.

Elias Woodwork is quality committed to the core. From the selection of trees with suitable grain and color characteristics to the final quality control inspection before products are packaged and shipped, Elias Woodwork strives for perfection. We use the latest and best technologies available to the wood manufacturing industry to ensure absolute accuracy and consistency in all steps of production. From German manufactured molding machines to Italian made flat-line spray systems and leading edge U.S. manufactured equipment, Elias Woodwork has spared no expense to bring its quality commitment to the forefront of every product offering. The combination of technology, expertise and quality control rise to the surface of every product that leaves our manufacturing facility bound for your next customer's kitchen.

Elias Woodwork is timely delivered on every product. From our Order Processing department to your receipt of tracking information for your in-transit order, Elias Woodwork strives for timeliness. Every step of the order entry process is given a deadline and overseen by your own personal Customer Service Specialist. Once your order has been confirmed, our Production department begins to cut components within a matter of hours. Our lean manufacturing mentality and production organization means that your order is simultaneously put into production in multiple departments. While the frames for your cabinet doors are being cut and shaped, the panels are being carefully selected and color matched, while the wood for your crown mouldings are pulled out of a lift of lumber and prepared for shaping. With every department overseen and collectively managed by our veteran Production Manager, you have more than 400 people working together to deliver your next project on time.

Elias Woodwork is environmentally driven in a conscious world. From our lean manufacturing mentality to absolute use of waste, Elias Woodwork strives for environmental accountability. In all corners of our production process we aim to remove redundancy, waste and product storage. Through years of hard work and experimentation our production processes have been refined and timed to produce components only as they are needed, and not sooner. In this way we reduce the need to store and handle excess product, eliminating all energy consumption associated with doing so. The unavoidable waste wood from our manufacturing processes is converted into heat for our facility and for our lacquer curing ovens. Further, we have the privilege of working with nature's very own fiber reinforced composite: wood. In partnering with us, you and your customers are safely storing carbon removed from the atmosphere by living trees and converted into wood. Wood is the utmost in renewable and environmentally friendly materials available today and is a living, breathing and beautiful choice in an environmentally conscious world.

RAW WOOD

The Premier Series catalog features a variety of door and drawer front designs with recommended moldings and accessories. Each product includes the following information:

Ordering

We know your time is your most valuable resource. Ordering or requesting a quote for any Premier Series door is easier than ever with Access Now Online Ordering. Any of the wood doors in our Premier Series can be ordered in various species described on pages 44-47 and customized with your finish of choice. We offer many finish colors and options which can be found on our website or in our sample color swatch chain. Convenient online order forms can also be found at www.eliaswoodwork.com. Your dedicated Customer Service Specialist is also ready to help!

Elias Woodwork is equally as proud of the products that are shipped raw as we are of our top quality stained and painted parts. Whether you decide to order coated or raw products, our commitment to quality is unwavering. Each cabinet door goes through the same rigorous quality inspection stations and careful sanding process, whether we are applying the finish coat or not. That ensures that you receive components which require minimal prep work, saving you time and money. Here are a few examples of our finish ready cabinet doors in Wood, Wood / HDF combinations, and entirely HDF in both one piece and five piece styles. Options beyond these are almost limitless. All of our products can be ordered in their raw state if you wish to add your finishing touch to our products. Our combination of technology, expertise and quality control rise to the surface of every product that leaves our manufacturing facility bound for your next customer's kitchen.

Why Use Wood?

Wood is, without a doubt, the most environmentally friendly building material on earth. Wood is renewable and is constantly growing. Wood is sustainable; harvesting the older trees allows the younger ones to grow creating a healthy and everlasting woodland environment. Unlike other materials, such as plastic, wood can be disposed of or recycled at the end of its useful life, without detriment to the environment.

WOOD STAINED

Elias Woodwork offers an extensive selection of standard stain colors across a wide range of wood species. Each stain has been carefully selected by our industry specialists to reflect the latest trends in cabinetry design, with colors suited to a broad range of customer preferences and market demands. Our finishing capabilities include traditional wipe-on stains, no-touch spray stains and advanced multi-step finishing processes. Every stain is developed with key principles in mind: visual appeal, production consistency and cost efficiency for our customers. Elias Woodwork utilizes automated stain application equipment whenever possible to ensure reliable color consistency while helping reduce finishing costs. Glaze colors and specialized glaze techniques can also be paired with stain selections to create distinctive, high-end finish combinations. A standard stain color program is available through our sample kit offering. Custom color matching and formulation services are also available, please contact a Customer Service Specialist for additional details. We understand the importance of color, craftsmanship and consistency in every project.

WOOD PAINTED

Elias Woodwork offers a complete line of products with an extensive solid color paint selection. These finishes are available on products manufactured with Wood frame / HDF panel combinations, as well as fully HDF doors in both one piece and five piece styles. Our solid color finishes are machine sprayed horizontally to achieve a smooth, high-build coating with excellent coverage and a no-sag, no-run appearance. Products are then machine transferred directly into environmentally controlled flash-off ovens with regulated heat settings. These ovens play an important role in minimizing airborne particle contamination during the finishing process. The result is a finish that delivers both exceptional beauty and long-lasting durability. Glaze colors and specialized glaze techniques can also be applied to solid colors, creating a wide range of attractive finish combinations. A standard solid color program is available through our sample kit offering. Custom color matching and formulation services are also available, please contact a Customer Service Specialist for additional information.

FRAMES & MULLIONS

Mullion cabinet doors are often included in kitchen cabinetry to add aesthetic appeal, a sense of elegance, and to display decorative items like fine china or glassware. The decorative mullions create intricate patterns over the glass, offering a sophisticated look and serving as a functional way to protect displayed items while showcasing them. This design also allows for a high degree of customization, with various patterns available to match different kitchen styles, from traditional to modern. Almost any of our door styles can be made as a frame with or without mullions and glass.

WOOD MOLDINGS

Moldings provide the finishing detail that completes a kitchen or millwork project with a refined, professional appearance. All of our wood moldings are available raw, stained, primed or painted, with additional specialty finishing options available, including glaze applications. Elias Woodwork recognizes the important role moldings play in cabinetry and interior design, which is why we offer an extensive range of profiles to complement virtually any style or project vision. This section highlights only a small selection of our most popular molding profiles, while our Product Catalog and website feature thousands of profile options to explore. If you are unable to find the exact profile you require, our Customer Service Specialists can assist with developing a custom molding solution tailored to your specifications. If you can envision it and provide the design, Elias Woodwork can manufacture a unique molding profile for your project.

The right custom accessories can give a kitchen a unique personality and be useful at the same time. Carefully selected corbels, posts, valances, and fillers are a designer's dream, while smart use of wine racks and floating shelves are both beautiful and effective. All of our wood accessories are available raw, stained, primed or painted and glazed. This is a small representation of the most popular accessories, but our Product Catalog and website boast many more options.

RANGE HOODS

Make a statement above the cooking surface with Elias Woodwork's premium line of range hoods—crafted to bring custom style, refined detail, and seamless coordination to every kitchen design. Built with the same quality and craftsmanship that define our cabinetry program, each range hood is available in various widths, wood species, stain & paint or RTF finishes to perfectly match surrounding cabinetry or stand out as a signature focal point. From timeless traditional profiles to clean contemporary silhouettes, Elias Woodwork range hoods deliver the ideal balance of beauty, performance, and design flexibility for projects that demand a polished, built-in look.

RIGID THERMOFOIL

Thermofoil, sometimes referred to as RTF (simply meaning Rigid Thermofoil) is actually a form of laminate. It is a vinyl film applied to MDF with heat and pressure. Thermofoil is available in a large variety of solid colors and many patterns including wood grains and metallic patterns. The application process makes it possible for Thermofoil to resemble wood, marble or granite detailing more closely than laminate can. Some of our new RTF colors have incredibly realistic textured wood grains that look great in many applications. Our door and molding styles, as well as our color selection, satisfy both timeless and trendy designs.

5 PIECE LAMINATE (FPL)

Directional grain patterns achieved by a real five piece construction process make this style of door an attractive choice. Realistic textured wood grain patterns have added to an already interesting line of products. The surface of polyester thermally fused laminates equals or exceeds vertical grade high-pressure laminates and outperforms foils, top coated papers and vinyl in wear, scuff, stain and heat resistance.

LAMINATE SLAB (TFL)

Straight lines and a smooth, simple look are easy to achieve with our line of Thermally Fused Laminate (TFL) one piece slab style doors. Our industry-leading machinery ensures a virtually invisible transition from the laser edge-band to the face of the door effectively enhancing this modern style. We have partnered with design leaders to display this color collection, so start designing today! Color choices are nearly endless with our TFL doors, so be sure to contact one of our Customer Service Specialists for more ideas.

AOS ELITE CUSTOM CABINET BOXES

Elias Woodwork provides a full custom solution to all of your kitchen and bath remodeling needs with our Assemble On Site (AOS Elite) line of Cabinet boxes. Our European style frameless cabinet boxes are available in standard white furniture board or UV finished birch plywood with two assembly options, custom sized to 1/16". Our cabinet boxes are designed to accommodate any new remodel or refacing project for the kitchen and bath industry. Available in any width, height or depth, they allow you to create a custom kitchen without the added expenses of creating your own cabinet boxes or shipping fully assembled ones. This in turn provides an economical edge for more competitive pricing.

Frameless AOS Cabinet Box Features:

- Available in white or classic maple furniture board or UV finished birch plywood.
- Edgebanded white or with various matching wood grains.
- Using Carb 2 Compliant materials only.
- Manufactured in North America.
- Lock Dowel Assembly:
 - Easy and fast assembly using only a rubber mallet and glue. No screws required.
 - Available in 3/4" (19mm) thick sides, backs, bottoms, tops and shelves.
- Screw & Dowel Assembly:
 - Easy fast assembly using supplied dowels and screws.
 - Available in 5/8" (16mm) & 3/4" (19mm) thick sides, backs, bottoms and tops. Shelves are 3/4" (19mm) thick.

Hardware: Unless otherwise specified, your cabinet boxes are quoted and supplied with door hinges and drawer slides.

Warranty: All components including cabinet boxes, cabinet doors and accessories come with a lifetime warranty against manufacturing defects in materials or workmanship.

Shipping: Freight costs vary with the weight and volume of the product and distance shipped. However, because we are shipping your cabinets packed flat, it will cost much less than shipping fully assembled cabinetry. Your hardware and other components are shipping together with your cabinet boxes. Everything is labeled to ensure ease of assembly. Orders are shipped by LTL Freight or courier.

We manufacture the following additional products to complete your project:

- Cut To Size Plywood
- Edgebanding
- Veneers
- Cutting Boards
- Laminated Slabs
- Cutlery Inserts
- Curved Dovetail Drawer Boxes
- Curved Molding
- Moldings For Any Application
- Wine Rack Lattice
- Louvered Doors
- Wainscot
- Bread Boards
- Face Frames
- Curved Face Frames
- Stair Railing
- Balusters & Newel Posts
- Knick Knack Shelves
- Door Options Such As Hinge Boring, Finger Pulls, Etc.
- Range Hoods

Contact us today to order your Sample Kit

Launch your sales process with our Dealer Aid Sample Kits—designed to support efficient product presentation and customer engagement. Each kit includes a curated selection of our most in-demand wood stain and paint finishes, an RTF sample book, and FPL samples, along with a comprehensive product catalog and Premier Series catalog.

To enhance the sales experience, every kit also features a cabinetry color visualizer card, ruler, and pen, plus access to additional marketing materials. For a more tailored approach, kits can be customized with your preferred door samples from our stocked door program.

Contact us today to explore available Sample Kit options and order a fully customized solution for your business.

Alder, Flat Cut

Clear – Color on this type of door will be fairly uniform with consistent grain structure. You will receive a light brown color matched door free of knots. This type of door is usually finished with a light colored spray stain.

Knotty – Color on this type of door will be fairly uniform but grain variations and knots of all types and sizes will be present. It should be noted that alder knots usually contain slightly opened cracks or are pitted. Even though the knots are pitted an attempt is made to make sure they are not completely through the door. This type of door is usually finished with a light colored spray stain.

Cherry, Flat Cut

Natural – is our most economical grade of Cherry. A variety of color and grain variations including sapwood and a moderate amount of pitch marks and or pin knots are randomly assembled to yield an attractive door with lively character. Virtually any spray stain finish colors work well on this wood grade depending on taste.

Select – Is our standard grade of Cherry. Color and grain variations are only tolerated to limited degree. The color is fairly uniform with little or no sapwood and well matched. Moderate color variations are allowed between doors. A few small pitch marks and/or pin knots may be allowed and some sapwood and or mineral streaks may be found in machined areas. This wood grade is well suited to most applications where medium to light spray stain finishes are required.

Premium – Is our finest grade of Cherry. Color and grain uniformity are assured. All products in a given order are made from material of the same color and grain characteristics with very low tolerance for pitch marks, sapwood, and pin knots or variations in machined areas. This wood grade is of excellent quality and perfect for clear or light finishes or where customers expectations of color uniformity are extremely high.

Rustic – Is a special designer grade of Cherry with enhanced character. Color, grain variations, and smaller knots including a limited amount of sapwood and a large amount of pitch marks are matched to result in a unique and expensive old world look. Virtually any finish colors in spray stains work well on this wood grade depending on taste.

Hickory, Flat Cut (sometimes called Pecan)

Premium – In our Premium grade of Hickory cabinet doors you will receive a calico look in each door. Sapwood and heartwood are matched and blended to flow through the panel in such a way as to minimize abrupt color changes along lamination lines. This is a very attractive, natural looking door and is usually finished clear but most light spray stains work well on this door.

Rustic – Our Rustic grade of Hickory is our most colorful grade. Color and grain variations including sapwood and heartwood are included in each door producing a door that has colors that range from whites to blacks. Closed knots, mineral staining, and pitch marks are allowed throughout. Doors in this wood type are usually finished clear but most light spray stains work well on this door.

Maple/HDF (Paint Grade)

Our most common paint grade cabinet door and our standard default is manufactured with a Hard Maple frame and an HDF panel. This product is best suited for a solid colored lacquer or “paint” finish. Please specify other combinations if required.

Red Oak, Flat Cut

Natural – Is our most economical grade of Oak. Color and grain variations are allowed with a time limited effort in matching. Mineral stain, sapwood, and a limited number of pin knots are allowed with the best side turned forward at glue up. Machining quality is the same as any other grade. This wood grade is best suited to medium to dark finished or spray stains with hiding characteristics.

Select – Is our standard grade used for Oak products. Color and grain variations are held to closer tolerances than in a Natural grade. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with a small amount of mineral streaks and sapwood allowed in machined areas. This wood grade is well suited to most applications where lighter spray or wipe stain finishes are specified.

Premium – Is our top grade of Oak. Color and grain uniformity are assured. All doors in a given order are made from material of the same color and grain characteristics with very low tolerance for variations in machined areas. This door is of impeccable quality and perfect for clear or light spray or wipe stain finishes where extremely quality conscious customers are involved.

Red Oak, Quarter Cut

Select – Color and grain variations are only tolerated to a limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with a small amount of mineral streaks and sapwood allowed in machined areas. Being Quarter Cut, this wood type creates a fairly 'straight grain' look with an emphasis being placed on choosing material with ray flakes. This wood grade is well suited to most applications where light to medium spray or wipe stain finishes are specified.

Red Oak, Rift Cut

Select – Color and grain variations are only tolerated to a limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with a small amount of mineral streaks and sapwood allowed in machined areas. Being Rift Cut, this wood type minimizes the ray flakes in the Red Oak and creates a fairly 'straight grain' look. This wood grade is well suited to most applications where light to medium spray or wipe stain finishes are specified.

Walnut, Flat Cut

Select – Is our standard grade of Walnut. Color and grain variations are tolerated to a limited degree. The color variation is fairly uniform allowing the lighter colors to appear only in some deeper profiles and on the back side of the door. A few pin knots and small knot clusters may be allowed if overall color is consistent. This wood grade is well suited for light stains to dark stains.

Rustic – Color variations and knots are purposely selected. The color may vary from a light creamy white to rich dark browns and this color variation may appear in some of the deeper profiles and on both the front and back faces of the door. The color variation together with the fact that we make sure each door has knots in the face of the door gives this wood grade a completely different look than our select grade. Walnut knots tend to be pitted and cracked in the knot area but you should not be able to see through them. This grade is well suited for all types of finish, depending on personal preference.

White Oak, Flat Cut

Select – Is our standard grade of White Oak. Color and grain variations are only tolerated to a limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors, with a few small pin knots being allowed. This wood grade is well suited to most applications where light to medium stain finishes are specified.

White Oak, Rift Cut

Select – Color and grain variations are only tolerated to a limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with a small amount of mineral streaks and sapwood allowed in machined areas. Being Rift Cut, this wood type minimizes the ray flakes in the White Oak and creates a fairly 'straight grain' look. This wood grade is well suited to most applications where light to medium spray or wipe stain finishes are specified.

White Oak, Quarter Cut

Select – Color and grain variations are only tolerated to a limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with a small amount of mineral streaks and sapwood allowed in machined areas. Being Quarter Cut, this wood type creates a fairly 'straight grain' look with an emphasis being placed on choosing material with ray flakes. This wood grade is well suited to most applications where light to medium spray or wipe stain finishes are specified.

White Maple, Flat Cut

Soft – Is the most economical wood grade. Color and grain variations along with mineral stained and brown or green heartwood are allowed with no effort given to matching. Machining quality is the same as any other grade. This wood grade is best suited for drawer boxes and solid color paints with good hiding characteristics.

Natural – Is an economical grade of Maple for cabinet door. Color and grain variations along with mineral staining and brown heartwood are purposely encouraged with a time limited effort in matching. Machining quality is the same as any other grade. This wood grade is best suited to medium to dark spray stains with some hiding characteristics.

Select – Is our standard grade form Maple products. Color and grain variations are only tolerated to limited degree. The color is fairly uniform and well matched. Moderate color variations are allowed between doors. A few of the smallest pin knots may be allowed along with at small amount of mineral streaks and brown heartwood allowed in machined areas. This wood grade is well suited to most applications where medium to light spray stain finishes are specified.

Premium – Is our finest grade of Maple. Color and grain uniformity are assured. All doors in a given order are made from material of the same color and grain characteristics with very low tolerance for variations in machined areas. This wood grade is of excellent quality and perfect for clear or light spray stain finishes or where customers demand a near "plastic laminate" quality look.
